[INBOX]

I have 2 \$500 money orders and this doc (which I'll have a printed copy of soon).

So either we can meet sometime before you head back, or give me an address to send everything to and I will do so, and then you can mail be back the promissory note.

As an alternative we can go shopping at microcenter (just down the road from pika) before you go back and I can just make out one of the money orders back to myself.

Cheers,

**From:** Daniel Clark  
**To:** Brad Manning  
**Subject:** Flessenlikker story!  
**Date:** Thursday, December 17, 2009 10:04:42 AM

---

I recently realized I've neglected to tell you why I sent you the black-handled red-tipped device.

It's an entertaining example of the wrong approach to an engineering problem.

See:

[http://en.wikipedia.org/w/index.php?title=Bottle\\_scraper&oldid=237116451](http://en.wikipedia.org/w/index.php?title=Bottle_scraper&oldid=237116451)  
(last version that was fun)

I like my friend Mako's original version (last paragraph for the impatient) the best:

The bottle scraper (known as both a flessenschraeper and flessenlikker in Dutch) is a Dutch kitchen tool similar to small spatula. It is specifically designed to scrape the contents of long bottles that would be otherwise impossible to reach with other kitchen tools. It is a common tool in kitchens in the Netherlands and available in most kitchen stores and even supermarkets but it almost wholly unused and unknown outside of the country.

Historically, vla (a popular custard like Dutch pudding) was sold in long glass bottles. This container made extracting the complete amount of pudding extremely difficult with either spoons or with other kitchen tools or spatulas. The Dutch answer was the bottle scraper which was specifically designed to answer this problem. Vla is now often sold in cartons which makes the need for a bottle scraper less pressing.

However, the scraper has come to occupy an important role in Dutch kitchens being used for scraping the contents of many other bottles and jars (e.g., peanut butter, Nutella, etc). Much of the Dutch population is familiar with the bottle scraper and skilled in it's use.

There is an element of the technical and engineering community that sees the bottle scraper as a monument to a wrong type of technical solution. This group argues that the best solution to the problem of remaining vla in bottles was to put vla in different containers preventing the problem from every occurring rather than inventing another tool and then education an a population in its use.

Cheers,

--

Go on eBay and get an S&G 8088 for \$9 and be done with it:  
[http://shop.ebay.com/i.html?\\_nkw=sargent+greenleaf+8088](http://shop.ebay.com/i.html?_nkw=sargent+greenleaf+8088)

The lock is designed for precisely this kind of situation... very difficult to defeat surreptitiously, not really resistant to forced entry.

I'd be curious to hear that story about theft from a safe inside a locked unit...

On 5/19/10 3:29 PM, Danny Clark wrote:

- > Short version:
- > (a) Can anyone recommend a hard-to-pick-but-not-insanely-expensive padlock? Does not need to be resistant to more forceful (drilling etc) techniques. (e.g. it is accepted that it will not actually stop a determined attacker, but it should be obvious if it has been defeated).
- >
- > (b) If you have strong negative experience with Metropolitan, it would help a lot of people to post a review, for instance at:

Unfortunately, those seals won't protect you because an adversary could easily just BUY the same seal for replacement, after tampering with the lock. Good seals should be metal, and have distinct serial numbers.

**Subject:** Re: [OT] Metropolitan Storage Warehouse horror stories  
**Date:** Thursday, May 20, 2010 6:22:02 PM

---

i use the metropolitan storage warehouse and from my limited experience with them thus far i've been happy with them. a colleague of mine stored a somewhat substantial collection of fine art and had no problems whatsoever.

as for me, i just needed a convenient and cheap place to store my vinyl record collection - nothing terribly valuable but quite heavy and fragile and climate-sensitive nonetheless. based on the size, price and overall experience with their management i would heartily recommend them over the nearby alternative -- UHAUL - which, if anything, is gangster central -- overpriced, unprofessional, and really crummy wooden-walled holes. the only things i have heard from others who use it were positive - i've heard no horror stories ever.

with respect to security what i did notice is that the warehouse sometimes keeps its loading bay doors open during operating hours -- and the building is SO INCREDIBLY huge that it would be possible for someone to sneak in and hide out inside. the building is so old that afaict they did not have extensive surveillance on the inside - which is one thing that would make them substantially better.

my 2 pence,  
max in london
